Sumitomo Precision Products Co., Ltd.

Sumitomo Precision Products launches MEMS ∞

Sumitomo Precision Products Co., Ltd. (Amagasaki City, Hyogo Prefecture, President: Hideaki Takahashi, hereinafter referred to as "SPP") is pleased to announce that it has established a new organization, MEMS ∞ (infinity), to expand the scope of its MEMS foundry services that has been traditionally conducted by its affiliate, Silicon Sensing Systems, Ltd. (hereinafter referred to as SSS).

MEMS (Micro Electro Mechanical System) is indispensable for the enhancement of various products, ultra-miniaturization, low power consumption, etc., and will greatly contribute to the "promotion of a post-5G digital society" and the "realization of a decarbonized society" that SPP is aiming for. SPP is unique compared to our competitors in that SPP has a full line of MEMS business-related capabilities of manufacturing equipment and device design, process development, and manufacturing.

In order to continue to realize our customers' ideas for MEMS devices and related systems as a business, SPP will take advantage of the above features of our company and expand the framework of the services that SSS has previously provided and provide consistent support from the concept study and concept design stage to prototyping and mass production.

In the prototype phase, SPP performs various prototypes and development using our own equipment, SSS's equipment, and partner companies' equipment, and in the mass production phase, SPP makes proposals according to the customer's mass production scale, in addition to SSS's mass production fabs, which have a proven track record in gyros, accelerometers, other MEMS devices, etc.
